

A big, growing market — *with a narrow way to win.*

The honest investor read: the markets under us are large and expanding, AI is the disruption layer growing 20-27% a year, and the money is made on **commerce + distribution**, not "AI renders" alone. Figures are **global** unless a Global/US/UK split is shown; the beachhead is English-speaking markets (US + UK). Numbers are real, sourced, and credibility-flagged.

The markets we sit in

We're at the intersection of designing homes and selling what goes in them. Keep these as *separate* layers (don't add them up — investors will flag double-counting).

INTERIOR DESIGN (GLOBAL)

\$138B

4.3% CAGR

→ \$176B by 2030

Grand View Research · solid

HOME DÉCOR + FURNITURE (THE COMMERCE WE ATTACH TO)

\$960B

9.4% CAGR

décor → \$1.6T by 2030; furniture ~\$700B more

Grand View Research · solid

AI INTERIOR DESIGN (OUR DISRUPTION LAYER)

~\$2B

21-27% CAGR

range \$1.5-3.3B today → ~\$11-15B by 2034/35

GVR / Polaris / SNS · cite as range

How it splits — Global · US · UK

MARKET	GLOBAL	UNITED STATES	UNITED KINGDOM
Interior design (services)	\$138B	~\$27B (flat/declining)	£1.5B ≈ \$1.9B (flat/declining)
Furniture	~\$700B	~\$240B	~\$13B
Online furniture (e-commerce)	~\$250-356B	largest single market	~\$10.6B · ~40% of UK furniture online
AI interior design	~\$2B → ~\$13B (2035)	largest share	no measured market yet · forecast ~\$1B by 2033
Design / staging audience	9M+ Airbnb listings	~1.4M Realtors (NAR)	~25k estate agencies · ~1.1M home sales/yr · ~451k short-lets

Global & US per Grand View / IBISWorld; UK per IBISWorld, Statista, HMRC, ONS (primary bodies). Splitting rule of thumb: **US ≈ 25% of the global** interior-design market; the UK is the largest single **European** share of AI-interior. UK £ converted at ~1.27. One honest caveat: **UK virtual staging is less penetrated than the US** (portals allow it if clearly labelled) — a growth opportunity, not yet a mature market.

Where it's going — the AI slice

The core interior-design market grows slowly (~4%). The *AI* slice is the fast part — roughly a **6-7× increase over the next decade**. This is the wave to be on.

AI-in-interior-design market, midpoints of published ranges (Grand View, Polaris, SNS Insider, Research&Markets). Backdrop: the broader generative-AI market runs ~37-44% CAGR toward ~\$1 trillion by mid-2030s (MarketsandMarkets, GVR, Precedence).

Our slice — TAM · SAM · SOM

The whole market, the part we can serve, and the part we can realistically win.

TAM · EVERYTHING

\$1T+

Home design + home commerce

All money spent designing homes (\$138B) and furnishing them (\$960B décor + ~\$700B furniture). We don't sell "the whole market" — it's the ceiling.

SAM · WHAT WE CAN SERVE

~\$15B+

Online + AI design + virtual staging + the furniture we influence

AI interior design (~\$11–15B by mid-2030s) **plus** the realtor/host staging audience — **~1.4M US Realtors + ~25k UK estate agencies** (~1.1M UK home sales/yr) and **9M+ Airbnb listings** (incl. ~451k UK short-lets) — **plus** affiliate commission on the furniture our shopping lists move.

SOM · WHAT WE CAN WIN (NEAR-TERM)

\$1–10M ARR

Hybrid + shoppable + regional wedge

Illustrative, execution-dependent: paid AI tiers + \$99 consults + virtual-staging for agents + affiliate commission on the furniture we move — focused on **English-speaking markets (US + UK)**. A realistic path to a few \$M ARR that makes us an attractive acquisition — not a promise.

Investors already fund this space

Real money in, real exits out — but the wins cluster at the *top* (platform/IPO) and the *bottom* (lean, profitable AI tools). The middle is where it gets dangerous (see the red row).

COMPANY	RAISED / STATUS	SIGNAL	
Manycore (Coohom/Kujiale)	IPO on Hong Kong exchange, Apr 2026	+144–172% day one ; tens-of-billions HKD cap. Proof the category can reach public scale.	Public
Havenly	~\$58M equity; acquisitive	Rolled up Interior Define, The Citizenry, The Expert — the commerce roll-up playbook.	Active
Yardzen	~\$12M → acquired by CRH/Oldcastle (Nov 2024)	Clean strategic exit to a building-products giant — the realistic exit path.	Exit
Collov AI	\$23M Series A (Apr 2026)	Fresh, sizeable VC into AI interior design — capital is available.	Active
Styldod / REImagine	\$1M seed — MLS Venture Fund	Investors reward distribution (wedged into the real-estate MLS system).	Active

COMPANY	RAISED / STATUS	SIGNAL
Modsy	>\$72M raised → shut down 2022	The warning: human-heavy e-design at VC scale + funding pullback + a collapsed acquisition = dead. Failed
MeltFlex / Interior AI / RoomGPT	\$0 VC (bootstrapped)	213k users / ~\$0.5M ARR at >99% margin / 1.6M users — lean & profitable works (but low barriers = need a moat). Lean

Where this business is going (and why it's fundable)

The 5-year view (to 2030): the AI-design market roughly doubles to ~\$4-5B, the category consolidates (more Havenly-style roll-ups and strategic acquisitions), and the winning model is clear — **commerce attach (shoppable) + B2B/real-estate distribution + a human-quality layer pure-AI tools can't match.** Designature can win a global niche in hybrid + shoppable across the US and UK, on a realistic path to a few \$M ARR and acquisition interest.

The 10-year view (to 2035): "design your room with AI and buy it" is mainstream, the AI slice is ~\$11-15B, and generative AI is everywhere (~\$1T). Value accrues to whoever owns **proprietary data, distribution, or trust** — not to another render tool. Exit is most likely a **strategic acquisition** by a retailer, building-products, or proptech player (like Yardzen→CRH), with IPO possible only at platform scale (like Manycore).

Why we're the fundable version, not the Modsy version: AI does the cost-heavy work (cheap renders), humans appear only as a **premium, margin-accretive** layer, and we monetize the **furniture sale** (affiliate) plus **virtual staging** — so unit economics don't depend on burning VC to pay designers. That's the exact mistake that killed the \$72M cautionary tale.

How to talk to investors (straight)

Cite with confidence

- Interior design **\$138B, 4.3%→\$176B** (Grand View)
- Home décor **\$960B→\$1.6T, 9.4%** + furniture ~\$700B (Grand View) — the commerce TAM
- AI interior design **as a range: ~\$1.5-3.3B → ~\$11-15B by 2035, 21-27% CAGR**, and name the firms
- Audience: **~1.4M US Realtors** (NAR), **9M+ Airbnb listings**
- UK (primary sources): interior design **£1.5B** (IBISWorld); online furniture **\$10.6B**, ~40% online (Statista); **~25k estate agencies**, **~1.1M sales/yr** (HMRC), **~451k short-lets** (ONS)
- Staging ROI: NAR — 49% of agents saw **less time on market**, 29% saw higher offers
- Comps: Manycore IPO, Collov \$23M, Yardzen exit, Styldod's MLS-backed seed

Avoid / handle with care

- Don't quote a single precise "AI interior design market = \$X" — it's thinly sourced; use the range
- Don't present a precise **virtual-staging** TAM (one shaky source) — use the audience + ROI instead
- Don't imply the core services market is booming — US interior design is **flat/declining** (IBISWorld)
- Drop vendor stats ("73% faster / 97% cheaper") and SEO-grade figures — sharp investors will catch them
- Pre-empt the **Modsy** question: show your unit economics are AI-led, not designer-cost-led
- UK: there's **no measured standalone AI-interior market** yet — use the ~\$1B-by-2033 figure only as a labelled forecast; note UK virtual staging is still emerging vs the US
